

Solar Solutions for UN organizations and NGOs

BIAB International has over 35 years experience as a supplier to UN organizations and NGOs. For over 25 years, Sundaya has been designing and manufacturing solar home systems and lighting solutions for areas outside the electricity grid.

Together we supply complete, customized solutions to UN organizations and NGOs.

With a wide range of products we provide the best solution for all your projects. We will analyze your situation and design a solution that fits your needs.

Sundaya System Solutions

The sun showers the earth with an abundance of energy. For decades Sundaya has designed systems that lets people all over the globe harvest and enjoy that energy.

With a focus on ease of installation and long term reliability we have developed products that provides a stable energy source in areas with unstable or nonexistant electricity grids.

Focusing on using the highest quality and most efficient components we develop systems with performance matched by no others.

Our modular design philosophy allows the installation to grow organically, from a single lamp to a house-wide system, all while staying interconnected to allow for optimum energy distribution.

Educational Kits

Our range of educational kits provide students with lighting and mobile phone charging facilities.

The kits range from individual kits for home use to larger systems catering to a whole school.

In addition to allowing the students to study during the evening hours, our solar lighting solutions also eliminate the fire and health hazards of kerosene lamps.

Emergency Kits

Complete kits, ideal for quick distribution in emergency situations, that provide both light and phone charging, all in a portable system that works as well indoors as outdoors.

Shelter Solutions

For longer term installations our larger systems provide a total household solution to provide lighting, run ceiling fans, TVs and charge phones. All this without the need for grid connection or costly diesel gensets.

Larger Premises Solutions

For larger premises, such as clinics, dormitories, administration centres or schools we provide tailor made systems.

After studying the location and learning about what equipment is to be used, we assess the actual energy demand of your project.

After designing the system, we not only provide you with the equipment, we also assist with training, installation and maintenance.
